HARVARD UNIVERSITY

Harvard Kennedy School
79 John F. Kennedy Street
Cambridge, MA 02138

Placement Director: Joseph Aldy joseph_aldy@hks.harvard.edu
Placement Director: Mark Shepard mark_shepard@g.harvard.edu
Administrative Director: Nicole Tateosian nicole_tateosian@hks.harvard.edu

Education

Harvard University
Ph.D. Public Policy, Economics Track, Expected Completion May 2027

University of Cambridge
M.Phil. Economics, 2016

University of Alaska Anchorage
B.A. Economics, Minor Mathematics, *summa cum laude*, 2013

Georgetown University
B.A. Economics, Minor Mathematics, First Honors, Transferred December 2010

Fields

Primary Field: Environmental and Energy Economics
Secondary Fields: Labor Economics, Education, Public Economics

Fellowships & Awards

Harvard GSAS Dissertation Completion Fellowship	2026-2027
Harvard University Graduate Prize Fellowship	2021-2023
Marshall Scholarship Finalist	2014
UAA Garth N. Jones Undergraduate Award for Excellence in Writing	2013
UAA Award for Academic Excellence	2013
UAA Bradford Tuck Senior in Economics Scholarship	2011-2012

Teaching

Principles of Economics – Macroeconomics (ECON 10b), Harvard University — 2024
Teaching Fellow for Professor David Laibson and Professor Jason Furman

Principles of Economics – Microeconomics (ECON 10a), Harvard University — 2023
Teaching Fellow for Professor David Laibson and Professor Jason Furman

Research Experience

Doctoral Researcher, HKS, Reimagining the Economy, Gordon Hanson	2022-2026
Research Professional, UAA, Institute of Social and Economic Research	2013-2015
Research Assistant, UAA, Experimental Economics Lab	2011-2013

Job Market Paper

Powering the Workforce: The Role of Community Colleges in Energy Transformations

Energy transformations change the skills demanded by local employers, but does training adapt alongside? I study how U.S. community college programs and graduates respond to energy-induced shifts in local labor demand. I focus on two energy transformations, the shale oil and gas boom and the ongoing expansion of solar power. In both, resource endowments determine the location, while advances in technology and policy determine the timing. Shale-exposed colleges expand energy programs by 30% and graduates by 117%, primarily through new program creation, while non-energy fields have 10% fewer programs and 31% fewer graduates, consistent with rising opportunity cost. Taken at face value, this response produced roughly 5,500 additional energy graduates in a decade, over one third of the estimated boom-induced increase in local middle-skill energy employment. The solar effect is smaller per new job created. Installing one gigawatt of local solar capacity raises solar programs by 10% and graduates by 21%. Yet, colleges nearly double solar sections in California course-level data, revealing a more flexible margin. Expansion appears to pay off. In individual-level records from Texas, energy graduates earn 14% more over ten years than observably similar peers in other technical programs. These findings demonstrate how energy transformations shape human capital formation through local training institutions.

Research in Progress

Blowin' in the Wind: The Impact of Climate Disasters on College Majors and Innovation, *with Avinash Moorthy*

Could extreme weather influence education and career choices? This project investigates how foundational experiences with extreme weather shape human capital formation and innovative activity. We study the causal impact of exposure to extreme weather on college major choices, and on the direction, quality, and intensity of inventors' output, examining whether shifts in educational pathways serve as a mediating channel. We use NOAA records on natural disaster damages to determine the timing and location of exposure. We combine these records with administrative data on educational institutions, college student surveys, LinkedIn employment and education histories, and individual-level patent records. Comparing students and graduation cohorts exposed to major natural disasters with their unexposed counterparts, we find preliminary evidence that exposure shifts major choices toward green fields, with stronger effects for earlier exposure. Turning to inventors, we find modest effects on green innovation, with stronger responses to late exposure. Our research provides new evidence on how personal experiences shape career trajectories and the evolution of technical progress, advancing our understanding of the factors that shape the supply of skills required to address a changing environment.

The Effect of Coal Power Retirements on Labor Market Outcomes, *with Gordon Hanson*

Nearly half of U.S. coal-fired generators operating in 2000 had retired by 2022, representing more than one third of coal capacity. As electricity production shifts elsewhere, do the industries and jobs that depend on it follow? We build a dataset of roughly 1,100 coal generators, linking EIA, EPA, and FERC records on plant characteristics and regulatory exposure. Using LASSO selection models, we identify size, age, and emissions as the key predictors of closure. Retirement is largely a plant-level decision and unfolds gradually over years of declining generation. Replacement of lost capacity is also incomplete. Between 2010 and 2022, plants that retired coal generators lost roughly 80% of their coal capacity and 40% of their total generating capacity. Total capacity in their counties fell nearly 15%, while generation expanded in non-coal counties, more than offsetting the losses. We evaluate the labor market consequences of this local contraction in generating capacity.

Employment

Credit Associate, Bridgepoint Capital	2019-2021
Investment Banking Analyst, Barclays Investment Bank	2017-2019

Affiliations

Doctoral Student Fellow, Harvard Environmental Economics Program

Seminars & Conferences

Harvard/MIT Environmental Economics and Policy Seminar	2026
CERAWeek NextGen Cohort Poster Presentation	2026
Carnegie Mellon University Engineering and Public Policy, Doctoral Student Participatory Workshop on Climate and Energy Decision Making	2026

Academic Service

Peer Mentor, Kennedy PhD Student Association (KPSA)	2024-2025
Social Chair, Kennedy PhD Student Association (KPSA)	2022-2023
